BALINESE CULINARY WEB APP

The Web-based Balinese Culinary Application is a digital platform that helps users discover, explore, and order traditional Balinese food online via a browser

WHY THIS APP IS NECESSARY

Easy of Access to Information

Tourists and the public often struggle to find regional specialties. This application makes it easy to access complete information on food, prices, locations, and ordering..

Responding to Technological Developments

In the digital era, people access more information through the web or applications. Therefore, a modern platform that is responsive and informative is needed.

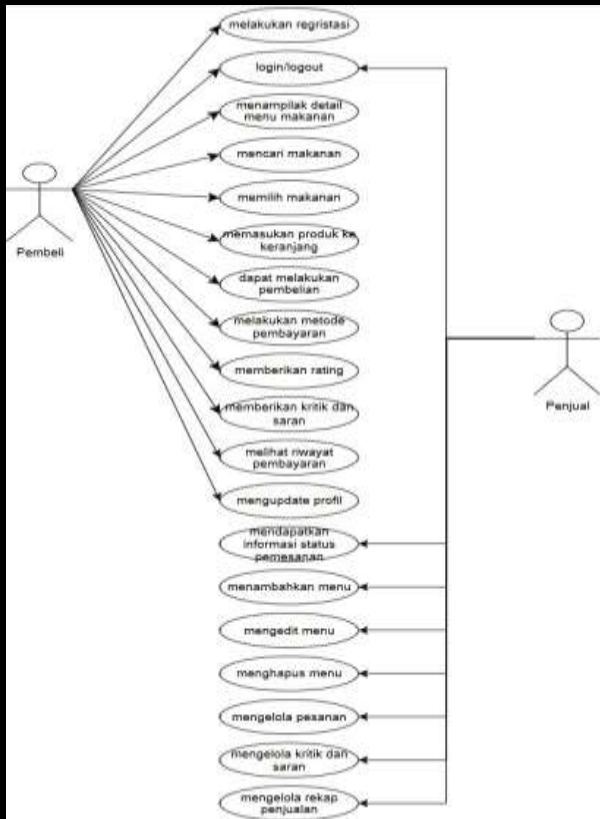

Digital Empowerment of Culinary SMEs

Many local food vendors in Bali have not yet embraced technology. This platform allows them to promote their

**THE SOLUTION IS A WEB APP
THAT PROMOTES BALINESE
FOOD, SIMPLIFIES ORDERING,
AND SUPPORTS SMALL LOCAL
BUSINESSES ONLINE.**

—

FUNCTIONAL AND NON- FUNCTIONAL NEEDS

As a Buyer (User - Customer):

In this web-based food ordering system, buyers can register, log in, manage profiles, browse menus, place orders, and choose bank transfer or COD payments. Sellers can manage products and view sales reports. The system ensures ease of use, speed, stability, and data security.

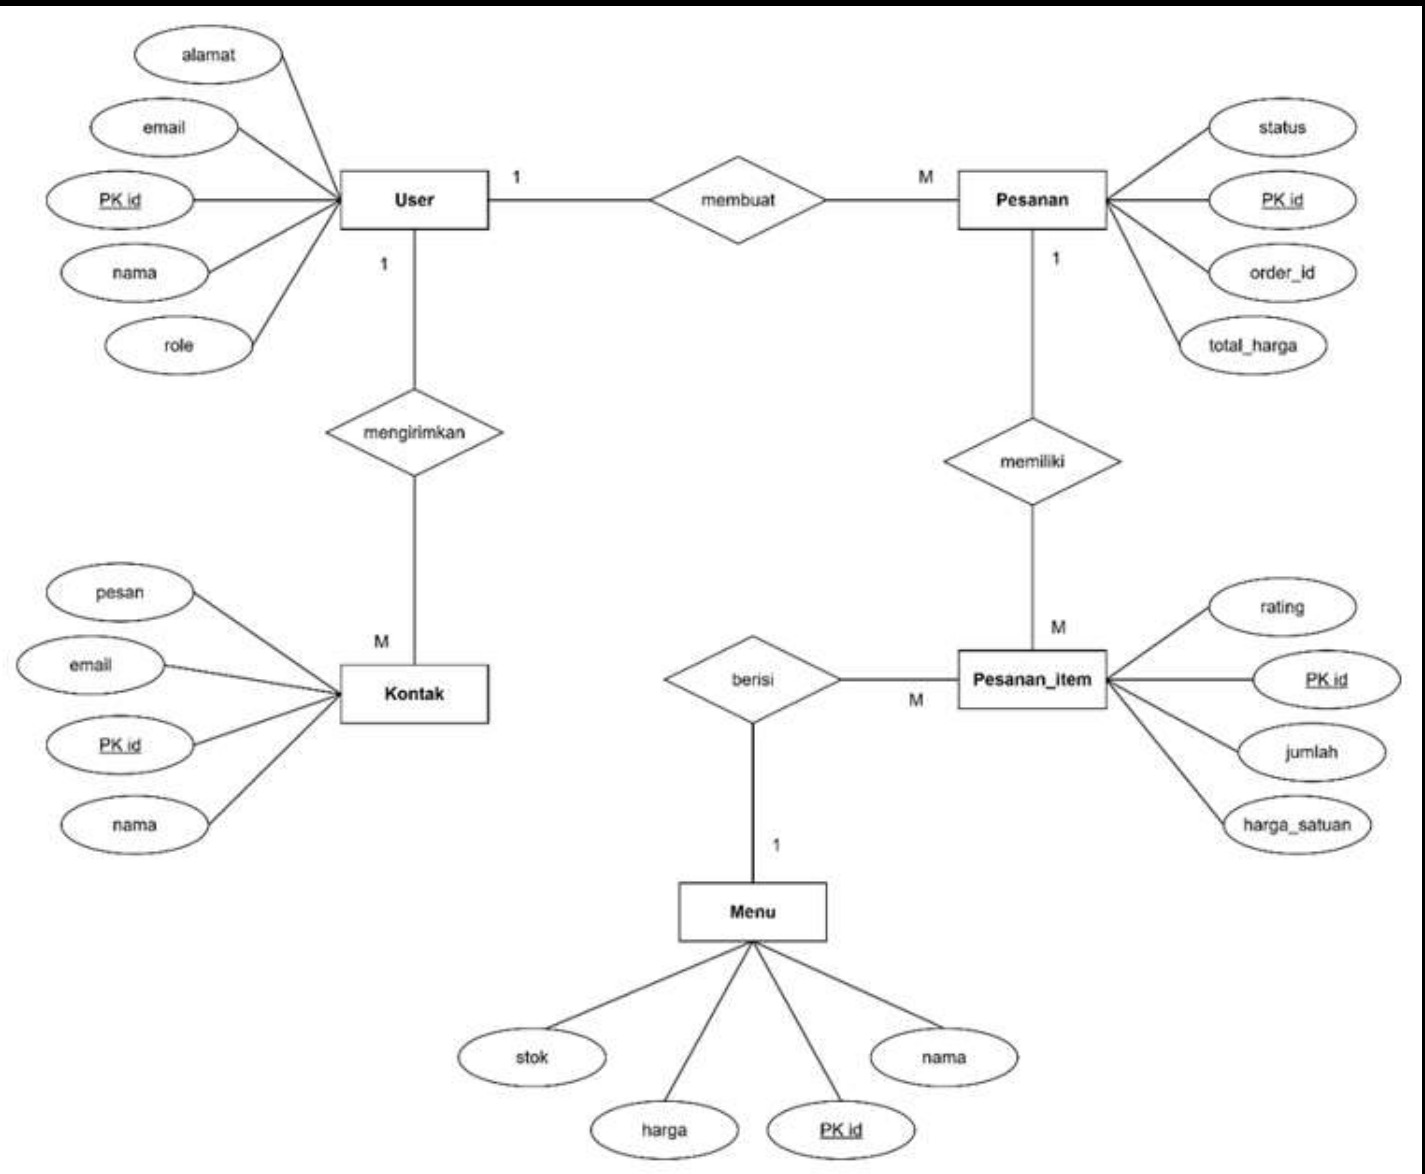

As a Seller(Admin)

Admins manage the entire system via a dashboard, handling user data, transactions, products, reports, and backups. The system requires encryption, high availability, smooth performance, and a user-friendly interface

Non-functional

For users, the system ensures secure data through encryption, a simple and user-friendly interface, fast response times, and stable performance on both desktop and mobile devices.

DIVISION OF TEAM WORK

Name	Team role	Workmanship
Juann Rizki Ramadhan	Fullstack Developer	Diagram Use-Case,Diagram ER ,View (Contact,OrderHistory)
Muhammad Abdul Ghofur	Fullstack Developer	View (Login and Register, and admin section)
Riansyah	Fullstack Developer	create Wireframe,View(homepage, menu, Payment. And Admin section)
Nafisah Nurul Wahidah	Fullstack Developer	create a user case scenario,View(login and register and back-end admin login section)

HISTORY OF PROJECT IMPLEMENTATION

ID	Tahapan	Detail Pengerjaan	Ouput	Mulai	Selesai	Progress	#
1	Analysis	Menyusun daftar kebutuhan fungsional dan nonfungsional yang harus dipenuhi oleh aplikasi,memahami tujuan yang ingin dicapai aplikasi dan bagaimna aplikasi akan membantu pemangku kepentingan, melakukan analisis kebutuhan untuk mengindentifikasikan fitur-fitur utama yang akan dikembangkan dalam aplikasi	Membuat Laporan RPP	2025-02-24	2025-03-10	20%	Hapus
2	Design	Menyusun rancangan mockup untuk sistem yang akan dikembangkan,merancang flow chart dan UML, membuat diagram alur flow chart, dan membuat sketsa wireframe	Figma,Diagram Usecase,Flowchart	2025-03-10	2025-03-24	50%	Hapus
3	Implementasi	Melakukan prose pengembangan aplikasi melalui penulisan kode program sesuai dengan desain yang telah di rencanakan,mencakup pembangunan fungsionalitas utama,integrasi antarmuka pengguna UI, serta memastikan setiap komponen berjalan dengan sesuai kebutuhan sistem	Implementasi bagian front end dan back end	2025-03-25	2025-05-29	80%	Hapus
4	Testing	Melakukan proses pengujian terhadap aplikasi yang telah dikembangkan untuk memastikan seluruh fungsionalitas berjalan sesuai spefikasi, mencakup pemeriksaan unit program, intergrasi antar modul, serta falidasi sitem secara menyeluruh agar bebas dari kesalahan dan siap di gunakan oleh pengguna.	Black-box Testing, White-Box Testing, Unit Testing	2025-05-29	2025-06-12	90%	Hapus
5	Maintenance	Melakukan proses pemeliharaan dan perbaiki sistem setelah aplikasi digunakan oleh pengguna, mencakup perbaikan bug yang telah ditemukan, penyusaian terhadap perubahan kebutuhan, serta peningkatan performa atau fitur guna memastikan aplikasi tetap berjalan optimal dan ralevant dalam jangka panjang	Perubahan kode, hasil ujicoba ulang.	2025-06-13	2025-06-28	100%	Hapus

APPLICATION TESTING AND DEPLOYMENT

Testing ensured all features worked properly and met user needs, using black-box, white-box, unit, and integration testing.

Fitur yang Diuji	Input	Expected Output	Hasil
Login pengguna	Email dan password valid	Redirect ke dashboard pengguna	Berhasil
Form tambah menu	Nama, harga, deskripsi valid	Data tersimpan dan tampil di daftar menu	Berhasil
Pemesanan makanan	Pilih makanan, isi jumlah, pilih metode	Data pesanan tersimpan dan tampil di histori	Berhasil
Kirim pesan kontak	Nama, email, isi pesan	Tampil notifikasi sukses	Berhasil
Rating makanan	Pilih bintang dan komentar	Rating tersimpan dan muncul di halaman detail menu	Berhasil

OBSTACLES AND NEXT PLANS

CONSTRAINT: Limited team knowledge of Laravel caused delays, especially in developing back-end and admin features.

FUTURE PLANS: Enhance Laravel skills and continue back-end development, focusing on fully completing the admin section to ensure project continuity and completion.

LESSON LEARNED

Through this PBL project, the team gained valuable technical and teamwork experience. We learned the importance of planning, task division, communication, time management, and documentation. For future projects, better planning, thorough testing, and deeper understanding of tools and frameworks are essential. This project strengthened our readiness for future challenges.

▪

CONCLUSION

THE "BALI CULINARY RECOMMENDATIONS" PBL PROJECT ACHIEVED ITS GOAL OF CREATING AN INFORMATIVE AND USER-FRIENDLY RECOMMENDATION SYSTEM. KEY FEATURES LIKE REGISTRATION, ORDERING, RATINGS, AND RECOMMENDATIONS WERE IMPLEMENTED WELL. WHILE THE SYSTEM MET BASIC NEEDS, SOME TECHNICAL AND DESIGN ASPECTS STILL NEED IMPROVEMENT.

THANKS YOU!!
